SUMMARY

Unity developer who specialises in performance: frame rate, memory, load time and build size. Shipped 16 titles that had to hold their frame budget on a 1 GB tablet. Looking for bigger scenes where that work matters.

CORE SKILLS

- **Performance:** Unity Profiler, Memory Profiler, Frame Debugger; CPU/GPU frame budgets, draw calls and batching, mesh baking, culling, memory, build size, startup time
- **Rendering:** URP, custom shaders (vertex animation, Shader Graph), Addressables for memory and load time
- **Core:** C#, Unity 6 and 2022 LTS, OOP, SOLID, design patterns, clean architecture, unit testing (Unity Test Framework), Git, Agile/Scrum, AI-assisted development (Claude Code)
- **Architecture:** Dependency Injection (Zenject, VContainer), MVC/MVP, UniTask, MessagePipe, ScriptableObjects, DOTween, UI (UGUI, UI Toolkit), custom Unity Editor tools, Odin Inspector
- **Mobile:** Android, iOS, Firebase, Remote Config, AppsFlyer, ad mediation (AppLovin, Unity Ads), IAP, meta systems (progression, economy, battle pass)

WORK EXPERIENCE

Unity Developer / Self-employed

September 2025 - present

- Raised an HTML5 playable ad from 10 to 60 FPS with 800 units on screen on an Amazon Fire 7 (1 GB RAM): baked the crowd into a custom vertex animation shader instead of one GameObject per unit. 2.9 MB of a 5 MB budget, built in one week

Unity Developer / Vira Games

July 2022 - September 2025 | Remote

Mobile games studio. Shipped 16 titles in 38 months as the only developer in a 3-person pod (game designer, artist, Unity developer). Every title had to hold 30 FPS on the studio's floor device, the Amazon Fire 7 (1 GB RAM).

Performance work:

- Raised **Crowd Control** from 12 to 30 FPS (83 to 33 ms) with 300 units alive: moved per-unit NavMesh pathfinding to one shared 0.1 s tick, shared paths, culled off-camera animation and rendering
- Raised **Squishy Octopus** from 18 to 30 FPS (55 to 33 ms) on Obi Rope soft-body: tuned the solver, per-store quality presets; level baker cut colliders from ~50 to 5
- Raised the **Jelly Merge** meta from 15 to 26+ FPS: baked growing structures of hundreds of cubes into meshes to keep draw calls flat

Also:

- Generated 30+ puzzle shapes for Blockin Color in the editor from painted textures, build held at 47 MB
- Rebuilt the biggest share of store builds when a policy change sent the whole catalogue back through compliance
- Extended the studio's shared SDK: analytics events, ad-mediation upgrade, one-click attribution SDK swap
- Built a title the studio reskinned twice: did one reskin, mentored the developer on the other
- Picked by the tech lead for the studio's VR hackathon, playable build in two weeks

PERSONAL PROJECTS

- **Memory Foyer** (GitHub) - Unity 6 spaced-repetition trainer, built in three weeks. Five-layer architecture compile-enforced via .asmdef; Domain and Application are pure C# (no UnityEngine), covered by 12 EditMode test suites. VContainer, UniTask, MessagePipe.

EDUCATION

Bachelor's in Computer Engineering / Taras Shevchenko National University of Kyiv

2020 - 2024 | completed alongside the full-time role at Vira Games

LANGUAGES

Ukrainian (native) | English (B2) | Danish (learning)
